

IN THE CLAIMS:

Please AMEND claim 14, and ADD new claim 19, as follows. For the Examiner's convenience, all the claims currently pending in this application, including those not currently being amended, have been reproduced below.

1-13. (Cancelled)

14. (Currently Amended) A method ~~for~~ of manufacturing a substrate having a fine line on a substrate face, said method comprising:

a fine-line forming step of forming the fine line on the substrate face, wherein a plurality of narrow-width ~~portion~~ portions is provided at an end portion of the fine line in a longitudinal direction, and the fine line is formed so that a width of the narrow-width portion ~~portions~~ in a parallel direction to the substrate face is smaller than a width of a portion adjacent to the narrow-width portion ~~portions~~, and in a section of the fine line cut in the direction of a normal line on the face forming the fine line on the substrate, the section comprises a part which is away from the substrate-side-end of the section, and a length of a part of the section in the parallel direction to the substrate face is longer than a length of the substrate-side-end of the section in the parallel direction to the substrate face, said fine-line forming step comprising:

(i) a step of providing a photosensitive material onto the substrate;

(ii) a step of projecting light from above the substrate onto a predetermined region on the photosensitive material; and

(iii) a developing step after said step of projecting light.

15-18. (Cancelled)

19. (New) A method according to claim 14, wherein the fine-line is a wire connected to a device.
